PROFESSIONAL SERVICES

Professional services offered include mechanical engineering, sustainable building design, energy conservation consulting, building commissioning, facility condition assessments and project management. This includes the complete design and supervision of all types of mechanical systems, including plumbing, heating, ventilation, air conditioning, fire protection, and controls systems for commercial institutional and industrial facilities.

TACE are also specialists in energy conservation studies and retrofit designs for all types of facilities. This includes the complete economic analysis of methods for reducing consumption, design, project management, and staff training. As members of the Canada Green Building Council, and with a LEED Accredited Professional on staff, TACE has the ability to provide support services with respect to "green building" projects, including LEED facilitation. With the widespread acceptance of sustainable design concepts in the construction industry, the importance of building commissioning has become a major factor in these projects.

As members of the Canadian Geo-exchange Coalition we have accredited professionals experienced in the design of geothermal heat pump systems, and are equipped to perform on-site thermal conductivity testing to optimize the design of your geothermal heat pump systems.

Valron Engineers Inc. is a well-respected structural engineering firm established in 1987 and based in Moncton, NB. With a staff of 13, Valron Engineers Inc. provides design and detailing services throughout the Atlantic Provinces. The firm consists of 7 professional engineers, 1 engineer-in-training and a technical support staff. The firm has provided structural design and related services on schools, university buildings, hospitals, hotels, churches, apartment buildings, correctional facilities and municipal projects such as pools, arenas and public works garages. The firm has also worked on foundations, tunnels, above ground and underground storage reservoirs and retaining walls. The firm serves clients in the mining, industrial/manufacturing, fishing and marine sectors. Bridge design and evaluation is another major area of practice that the company is recognized as having an expertise in.

FGA Consulting Engineers Limited is a Newfoundland firm established in 1983, providing multi-disciplinary engineering consulting services in the areas of:

- . Structural Engineering
- . Welding Engineering
- . Civil Engineering
- Materials Engineering
- . Mechanical Engineering
- . Prime Consulting Services
- . Non-Destructive Examination
- . Forensic Engineering

Originally formed to provide specialized consulting engineering services in the fields of structural design and welding engineering, it has expanded around these two specialities to meet the specific needs of its customers and the Newfoundland industrial marketplace.

FGA is a division of ACUREN Group Inc., through which it provides consistent competent and conscientious service by a team of engineers and inspection specialists dedicated to providing integrity, quality service and professionalism in the field of non destructive examination.

Altius conducts mineral exploration programs on 32 mineral properties in Newfoundland and Labrador. Several of these mineral properties are subject to earn-in or joint venture agreements with other industry partners. In most instances, exploration partners retain Altius' expertise and manpower to conduct exploration programs on their behalf.

Since Altius Resources is wholly owned by publicly traded Altius Minerals Corporation, we want to ensure that all facets of our mineral exploration programs, either for our own projects or those partnered, meet with all compliance and regulatory controls.

Atlantic Engineering Consultants Limited offers a multi-disciplinary range of consulting services in the areas of Municipal, Civil, Structural, Electrical, Mechanical and Environmental design, contract administration and project management including procurement and construction supervision. Services encompass the total project from initial concepts, feasibility and economic studies to the design and final construction stage.

Atlantic Engineering Consultants Limited's team of experienced professionals and support staff can capably handle a broad range of construction projects. Building services include the design of varying building types including residential, commercial, institutional and industrial. Civil services offered include Municipal Engineering such as subdivision design, water supply and distribution systems, sewage disposal and treatment systems, runoff and flood control, highway and road design, bridges, drainage structures and marine projects such as wharves, breakwaters, retaining structures, docking facilities, cargo terminals and passenger terminals. Heavy Civil services offered include Engineering, Procurement and Construction supervision for the Pulp and Paper, Mining and Manufacturing Industries along with service to the Offshore Oil Industry. Also included are transportation structures such as highways, bridges and culverts, underpasses and overpasses, retaining structures and drainage structures. Electrical services offered include building electrical systems, transmission and distribution systems, fire alarm, lighting and emergency power systems, along with control and energy management systems. Mechanical capabilities include heating, ventilation, air conditioning, plumbing and fire protection systems for residential, commercial, institutional and industrial projects. Environmental services include environmental assessments and impact statements, studies, monitoring programs, etc.

C-CORE is a Canadian research and development corporation of Memorial University providing innovative engineering solutions to national and international clients. Its dynamic team of 90 engineering and business experts provide advanced technology solutions to clients in primarily the natural resource sectors including offshore oil and gas production and transportation, gas transmission (onland pipelines), mining and hydro. International and national government clients also use the services of C-CORE to address security, sustainability and safety issues related to their regulatory and operating needs.

In business since 1975, C-CORE's specialized engineering R & D services are focused on technology development adaptation, testing and integration and advancing scientific knowledge and engineering processes. Project teams are assembled based on client need and draw upon the corporation's core expertise in:

- Radar & Vision Systems
- Ice Engineering
- Geotechnical Engineering

Many complex projects require a multi-faceted solution where this expertise is combined for a complete, end-to-end solution.

C-CORE is registered to: ISO 9001:2008

PROFESSIONAL SERVICES

CORE Engineering Inc provides to their clients, economical, efficient, and code compliant designs based on current technology and construction methods. Some of the services offered include:

Mechanical: Complete design and construction supervision for mechanical building systems including: heating, ventilation, air conditioning, plumbing, sprinkler, fire suppression, refrigeration mechanical processes and control systems.

Electrical: Complete design and construction supervision for electrical building systems including: service entrance and distribution, interior and exterior lighting, exit and emergency lighting, heating, fire alarm, intrusion alarm, and data and voice infrastructures.

In addition to the general mechanical and electrical building systems design mentioned above, CORE also provides the following specific services:

Energy Management, Heat Pump Technology, Control Systems, Industrial Refrigeration, Petroleum Industry, Propane Systems, Power Quality.

COMPANY BACKGROUND

Crosbie Engineering Limited is a locally owned consulting engineering firm specializing in electrical and mechanical system design and project management services for commercial, industrial and institutional projects. Since its incorporation in 1988 the firm has employed a highly technical staff including electrical and mechanical engineers, technologists, technicians and administrative people. The continued growth of the firm is the result of prudent management and the provision of quality service to its clients.

SERVICES:

Electrical - electrical design and/or supervisory services for power distribution, prime/standby diesel generator power systems, instrumentation and control designs for industrial processes, lighting, heating, energy management systems, motor control centres, programmable logic controllers, security, sound, fire alarm systems, and short circuit overcurrent coordination studies.

Mechanical - provides a complete range of services from concept to completion. We aim to fully address our client requirements while completing feasibility studies, preliminary planning, and through final design and execution. We offer highly trained technical staff utilizing state of the art computer systems & software tools to meet the challenges and demands of diverse project requirements. We provide mechanical engineering services in the

following areas: plumbing systems, HVAC, industrial ventilation, building control systems, fire protection design, heating plant design, refrigeration systems, motor controls, dust collection, and specialized ventilation systems, specialized hospital systems, medical gas systems, indoor air quality review, laboratory environmental controls and special support systems.

Energy Management - Mechanical & electrical energy studies and recommendations for commercial and industrial processes; calculation of savings and payback periods; preparation of drawings and specification for energy retrofit of buildings.

Communication System Design - Data Network system design and specification for commercial and educational facilities. RF and fibreoptic communications systems design.

PROFESSIONAL SERVICES

DBA Consulting Engineers Ltd. is a structural/civil engineering firm offering expertise and experience in a wide range of structural and civil engineering projects.

Structural Engineering projects include:

- Multi-story steel and concrete structures.
- Large span industrial structures with heavy cranes.
- Masonry structures
- Heavy timber structures
- Failure investigations

Civil Engineering projects include:

- Site services - parking lots.
- Concrete box and arch culverts
- Small bridges
- Marine Structures

Engineering services provided range from preliminary studies and assessments, pre-design, design, contract documents, tender call, contract administration and inspection services

PROFESSIONAL SERVICES

As with many things at Dillon, our organization structure breaks with the traditional model of the technical services industry. It is designed to specifically serve our clients well, providing the opportunity to blend client and industry knowledge with a focused project team drawn from our talent pool of over 700 individuals.

We are focused on five client sectors: government, industry, resource, real estate, and international. All of our clients are aligned to one of these sectors. Each sector has leader tasked with the responsibility to develop Dillon's understanding of the unique requirements of clients within each. Each client we serve within those sectors has a client relationship manager. These individuals have the responsibility for developing long-term relationships with our key clients, for determining which services we can most appropriately provide, and for selecting project managers to lead each client's assignment.

PROFESSIONAL SERVICES

ENG Environmental Technologies inc. has been involved in various project applications relating to environmental support for small rural communities and municipalities throughout Canada since it was founded in 1999. ENG has provided engineering and technical services on new and existing process treatment systems and equipment, worked with local engineering with the contract design and construction of water and wastewater treatment facilities.

ENG also provides contract services for the design, supply, installation and commissioning of "Packaged" potable water and wastewater treatment plants for municipal applications in Atlantic Canada. "Tried and True" traditional conventional processes and innovative newly developed treatment technologies and equipment have been adopted and implemented to meet the requirements for specific client design applications and limited capital resources.

ENG's key player Steven G. Wheller, P.Eng., founder and owner of ENG has acquired over 25 years of experience in designing, operating and technically supporting water and wastewater facilities throughout Canada. Presently, ENG provides technical support services through its two offices located in St. John's, NL and Halifax, NS.

PROFESSIONAL SERVICES

Fracflow Consultants Inc. (Fracflow) is a 100% Canadian owned and operated company that was founded in 1981 to provide specialized consulting services in hydrogeology and geological engineering. Since that time, Fracflow has grown and now offers a wide range of services in: Hydrogeology and Surface Water Hydrology; Environmental Assessment and Remediation; Contaminant Hydrogeology; Geological Engineering and Rock Mechanics; Geotechnical Engineering and Soil Mechanics; Environmental Impact Assessment. The services provided by Fracflow range from simple analysis based on our collective experience and judgement to state-of-the art field studies and numerical modelling. We are a group of professional engineers and geoscientists committed to using the most appropriate level and methods of investigation and analysis for a given problem, taking into account both technical and economical considerations. Fracflow has conducted a number of multi-component and multidisciplinary projects. Where necessary, Fracflow augments a project team with specialists or establishes joint ventures with other firms, as needed, for specific projects. This arrangement ensures that the personnel assigned to each project have the qualifications and experience necessary to meet project needs, using local expertise wherever possible. Our clients include government and research organizations as well as companies in the mining, construction, consulting, and petroleum sectors. Activities range from overall project management to specialized rock, soil, and water testing services.

PROFESSIONAL SERVICES

Golder is an employee-owned global engineering company. This, when combined with the recognition of the link between quality, innovation and client service and a sustainable long-term business results in a strong commitment to quality and service. As senior shareholders, principals and associates are ultimately responsible for and ever mindful of managing quality in all aspects of the work Golder undertakes.

Golder's success is based on its investment in its employees. Its greatest resource and their high level of qualifications, experience and specialization. They work closely together through global work teams and meet virtually on a monthly basis to share effective and innovative solutions that meet the needs of each client. Moreover each employee benefits from an objective of participation in 30 hours of training every year. This can be completed through the internal "Golder U" program or through recognized external organizations. Thus, all employees take part in general and specific training allowing them to always be at the forefront of technical knowledge and discoveries. Growth, much like the diversity of services and staff, matched the evolution of the clients needs which change constantly in a complex global environment.

Golder's mission is to participate in the community's sustainable development and contribute to protecting the quality of the environment. The company also leads the way when it comes to health and safety in each of its sectors of activity. Furthermore, Golder's socially responsible employees pride themselves in helping the community in which they work and live.

PROFESSIONAL SERVICES

Founded in 1919, Halliburton is one of the world's largest provider of products and services to the energy industry. With more than 70,000 employees in approximately 80 countries, the company serves the upstream oil and gas industry throughout the lifecycle of the reservoir - from locating hydrocarbons and managing geological data, to drilling and formation evaluation, well construction and completion, and optimizing production through the life of the field.

Drilling and Evaluation. Drilling and Evaluation provides field and reservoir modeling, drilling, evaluation and precise wellbore placement solutions that enable customers to model, measure and optimize their well construction activities. This segment consists of six product service lines:

- Baroid
- Drill Bits and Services
- Landmark Software and Services
- Sperry Drilling
- Testing and Subsea
- Wireline and Perforating

Completion and Production. The division delivers cementing, stimulation, intervention, pressure control and completion services. Completion and Production consists of four product service lines:

H.T. Kendall & Associates Limited is a Newfoundland engineering consulting firm specializing in the provision of innovative solutions for a broad range of municipal infrastructure projects. Projects successfully completed by this firm include the following disciplines:

- . Municipal infrastructure projects, involving water, sanitary and storm sewer design and construction projects
- . Complete residential land development
- . Recreational open space design; recreation facility design and rehabilitation
- . Municipal solid waste disposal system design and evaluation
- . Municipal infrastructure assessment and evaluation studies
- . Underground pipe location
- . Flow monitoring, leak detection
- . Computer simulation of water and sanitary sewer systems
- . Tourism and marketing studies
- . Environmental assessment audits
- . Water quality assessments
- . Treatment plant operational assessments
- . Underwater engineering inspections
- . Environmental site assessments, Phase I & Phase II

A full range of services are provided from advisory to post construction commissioning, including feasibility studies, preliminary and detailed design, contract administration, on-site supervision, tendering and commissioning.

Description of Professional Services:

Our engineering and support team is located on the west coast of Newfoundland. We have a diverse working experience and offer quality design and assessment services in areas of Mechanical and Electrical Engineering, including:

- Residential, commercial, institutional and industrial HVAC, plumbing systems. Building electrical systems, electrical transmission and distribution systems, fire alarm, lighting and emergency power systems, building management control systems and energy management systems for sustainable building projects.
- Machine components for hydroelectric power generation, pulp and paper, mining, logging and lumber production. Industrial bark and oil burning boiler upgrades and repairs. Hydraulic systems, machine safe-guarding, conveying systems, pumping and piping systems.
- Machine component reliability and failure analysis. Equipment maintenance review, planning, procurement, construction supervision and project management
- Commercial vehicle weight rating verification, evaluation and certification.
- Lean manufacturing and six sigma coaching services for continuous improvement.
- Drafting services

Oceanic Consulting Corporation is an engineering firm specializing in performance evaluation of naval architectural and ocean engineering systems.

An alliance venture between the private sector, National Research Council of Canada, and Memorial University of Newfoundland, the firm is a commercial front door to one of the world's most comprehensive collections of ocean engineering facilities.

Our people have an extensive background in performance assessments of ships, offshore structures, small craft, survival equipment and other marine systems in a range of severe conditions from arctic environments to extreme seas. This combination of facilities and expertise enables Oceanic to cost effectively provide our clients with timely, world class results.

Peter Kiewit Sons provides constructibility and costing* advice to prospective clients and other consultants. Typically, a complete construction execution plan for multi-disciplined projects is provided. Scheduling information and productivity guidance for various disciplines is provided. Often this information will provide input to clients' project sanction decisions.

Pinchin LeBlanc Environmental Ltd. is a multidisciplinary consulting and engineering firm providing a full range of environmental services related to:

- Hazardous Materials (eg, asbestos, lead PCB's and Mercury) assessment & abatement
- Environmental site assessment, remediation and management
- Environmental monitoring - Air and Water
- Human health and ecological risk assessments
- Indoor air quality & mould
- Radon assessment & mitigation systems design
- Occupational hygiene
- Occupational health & safety
- Property condition assessments and reserve fund studies
- Building science investigations and building envelope assessments
- Training

We are a proud Atlantic Canadian Company established in 1993. Our Head Office is located in our own building in Dartmouth NS with branch offices in Saint John, NB, St. John's, NL, Corner Brook, NL, and Labrador City, NL.. Our total staff complement is over 50 including Professional Engineers, Professional Geoscientists, Environmental Scientists, Certified Technologists, Occupational Hygienists and technical/support staff. We are a member of the Pinchin Group of companies with staff totalling more than 300 located in 28 offices across the country.

Technip Canada Limited is the Canadian division of the Technip Group based in St. John's, Newfoundland. The company's involvement in the oil and gas industry in Atlantic Canada spans over 15 years, and it continues to build on its commitment and experience in the region.

For more than 50 years, Technip has demonstrated its ability to anticipate and adapt to changing market trends and customer expectations. Through international expansion and continuous development of our expertise and know how, Technip has evolved into a world-class engineering group.

From the deepest Subsea Oil and Gas Developments to the largest and most complex Offshore and Onshore infrastructures, our 32,000 people are constantly offering the best solutions and more innovative technologies to meet the world's energy challenges. Present in 48 countries, Technip has state-of-the-art industrial assets on all continents and operates a fleet of specialized vessels for pipeline installation and subsea construction.

Established in 1998, Contrast Engineering Limited (CEL) is an Atlantic Canada based forensic firm that provides forensic engineering and forensic science consulting services to the insurance and legal communities of Atlantic Canada. We are Atlantic Canada's largest independent multidisciplinary forensic firm dedicated to forensic engineering and forensic sciences, with offices in Nova Scotia, New Brunswick, Newfoundland and Prince Edward Island.

Our unique business model sets us apart from our competition. Our team approach to solving complex problems has allowed us to bring together some of Canada's top forensic engineers, scientists and investigators. Through the individual and combined in-depth expertise of our team, we systematically remove the multiple layers of complex losses, exposing the root cause. In the field or in the office, regardless of the type of loss, with the aid of technology, the investigating consultants have full access to the expertise of the entire team.

EM&I Stantec Ltd. Is a Canadian company offering O-AIMS (Operations Asset Integrity Management System) services to Oil, Gas and Energy Companies. These services include:

- Strategic Improvement Plans
- Document Development
- Baseline Surveys
- Integrity Database Management
- Rope Access Inspection
- Metallurgy/Mechanical/Marine Engineering Services
- Corrosion and Design Engineering Services
- Engineering Risk Assessments
- Regulatory Compliance Service
- Quality Assurance Services
- Non Destructive Examination
- Inspection Monitoring and Reporting
- Fitness for Service

EM&I Stantec Ltd. Operates from offices in St. John's, Halifax, and Fredericton and is supported by the extensive infrastructure and staff of EM&I and Stantec across North America and globally. As a joint venture company between EM&I Maritime and Stantec Consulting Ltd. We have direct access and support from numerous resources including equipment, personnel and facilities. Together we have successfully undertaken many projects for the oil

PROFESSIONAL SERVICES

Mercator Geological Services Limited is a Dartmouth based geological consulting firm that has been providing professional services to the mining and energy sectors for over 14 years. Our strong team of professional geoscientists and support personnel offers expertise in project design and management, mineral resource modeling and evaluation, site based environmental services, GIS mapping, quality assurance and quality control studies, and technical reporting.

By utilizing specialized computer applications and professional field services, we've developed proficiency in various geological, geochemical, geotechnical, and geophysical survey methods, and these augment sound experience in drilling program management and design. Project work has included involvement in public consultations, environmental site assessments and permitting, compliance monitoring, mining site remediation, erosion control, resource estimation studies and mineral exploration activities.

Mecator's domestic and international consulting experience is focused on innovative solutions, sound technical advice and state of the art field-oriented services. Full-service support, web based services, and comprehensive corporate graphics and presentation materials complete the package, providing the clients with a fully integrated professional consulting service.

<i>Sub-discipline(s)- Geoscience:</i>

PROFESSIONAL SERVICES

Structural Engineering

We are experts in load capacity and structure analysis in concrete, steel and wood, and bring an intricate lattice of ideas to any project. Our focus is to develop a structure that is sound, elegantly designed, financially viable, easier to build, and excellent value. Our core services include: buildings and additions, industrial plants, bridges, tower crane foundations, structural analysis, restoration and upgrades, failure analysis, load capacity reviews, pre-purchase evaluations, contract document preparation, contract document administration. We also provide site investigation, feasibility studies, equipment installation procedure, and expert witness testimony.

Mechanical Engineering

Our mechanical engineers are relentless in finding optimal solutions. We make the most of natural heating, cooling and ventilation. Next, we add simple, energy efficient systems that work in concert with a smart building envelope. We are amongst the first to use some of the most innovative international systems. As a result, our buildings perform better. They are more efficient to operate and maintain and better for the environment overall. Our core services include: systems and equipment analysis and design, energy, water and indoor environmental quality research and studies, building envelope energy modeling, thermal mass optimization, code evaluation and compliance, commissioning, contract document preparation and administration. We also provide lifecycle analysis, expert opinion and failure analysis, combustion analysis, vibration and sound analysis, and project coordination.

Electrical Engineering

Engineering and Geoscience Directory

Newfoundland And Labrador

November-29-17

Our team of engineers, technologists and technicians are experts in all phases of electrical work-power, lighting, voice and data sound, AV and security. We combine technology and design to build systems that are functional and energy efficient and of course, but also aesthetically pleasing. Our core services include: new construction, renovations, existing facility evaluations and inspections, daylighting analysis, systems evaluation, design, commissioning and testing, operation and maintenance evaluation. We provide systems design for power distribution, emergency power, UPS, computer aided lighting, fire alarm and life safety, voice and data, and paging and sound.

Stafford Bandlow Engineering Inc. (SBE) is a professional consulting and design firm specializing in the electro-mechanical and electro-hydraulic systems for movable bridges. Our in-house personnel have experience on hundreds of movable bridges located throughout the U.S. and Canada. Our experience encompasses all types and vintages of movable bridge including bascule (trunnion and scherzer), swing (center bearing and rim bearing), vertical lift (span drive and tower drive), and specialty bridges (floating, Strauss, Brown, etc.). Our experience includes both highway bridges and rail bridges and we are knowledgeable in the governing AASHTO, AREMA, and CHBDC standards. We are thoroughly familiar with railway safety work requirements, having provided engineering services to seven independent railroads.

PROFESSIONAL SERVICES

Abitibi Geophysics Atlantic Inc. can design and carry out mineral exploration programmes, including full logistical support, field work and interpretation. Field work includes prospecting, geological mapping, geophysical and geochemical surveys, and diamond drilling management. Geophysical surveys include high resolution and regional GPS/gravity surveys, gradient, multi-dipole, and borehole induced polarization (IP) surveys, time and frequency domain electromagnetic (EM) surveys (borehole and surface) magnetic surveys, ground penetrating radar (GPR) surveys. We provide a high level of interpretation, integrating all field results. To support geophysical interpretation we also offer 2D and 3D inversion modeling of IP, EM, mag, and gravity data.

Abitibi also designs, performs, and interprets surveys in geotechnical, and contaminant environments. Techniques include ground penetrating radar (GPR), electromagnetic, magnetic, conductivity/resistivity mapping (EM/IP). Applications include mapping bedrock depth, location of buried utilities, structures, and cavities, mapping of contaminant plumes.

Petroleum Exploration - management and logistical support in land seismic surveys, gravity and marine magnetic surveys.

Andritz Hydro is a global supplier of electro-mechanical systems and services for hydropower plants and one of the leaders in the world market for hydraulic power generation. We promote hydropower as the most economical form of renewable energy. In close cooperation with our customers we elaborate long-lived, environmentally friendly concepts. The sustainability and conservation use of resources are given top priority.

Andritz Hydro has:

- .More than 170 years of accumulated experience in turbine design
- .over 30,000 turbines(more than 400,000MW) installed globally
- .Over 120 years of experience in electrical equipment
- .the complete range up to more than 800 MW

Andritz Hydro is a leading supplier in the service & rehabilitation sector and a world market leader for compact hydro.

Andritz Hydro is headquartered in Vienna, Austria and has more than 50 locations in 20 countries worldwide.The company is organized in five main divisions:

- . Large Hydro; . Service & Rehab
- . Compact Hydro; . Generator Turbo; . Pumps

AXOR Experts-Conseils Inc. is an engineering consulting firm offering services for many different projects in various specialities such as Environmental (waste water treatment plants, filtration plants, biomethanization, etc.), Municipal (aqueducts, rainwater drainage, sewer systems, underground power lines, etc.), roads, as well as other mechanical and structural works associated with the design of commercial, residential and industrial buildings. Axor intends to offer its services as a consultant to Cliff Natural Resources at its Wabush, Labrador ore mining site. Our involvement with Cliff Natural Resources is focused on the interception and treatment of mining effluents, preventing the release of mining impurities to the surrounding waters. This industrial wastewater treatment project integrates Civil (Environmental, Municipal & Structural), Mechanical, and Electrical engineering disciplines. AXOR Experts-Conseils Inc. is applying for licensure specifically for this project but may also bid on other projects in Newfoundland and Labrador in the future.

For more information on our past and current projects, please consult our website at <http://www.axorexperls.com/Experlise-en.html>

Since a long time, the management of the company has established its commitment to implement a successful quality assurance system. In 1996, Groupe- Conseil TDA was accredited to the ISO-9001 standard requirement. Groupe-Conseil TDA offers comprehensive engineering services to diverse customers that can be found in the provincial and federal governments, public and parapublic agencies, municipalities, large industrial companies and SME's. Since September 2008, we moved into new premises located at 26 boulevard, Comeau. In the same building, we offer various engineering services: structural, civil, mechanical, electrical, automation and IT.

PROFESSIONAL SERVICES

DCI Engineers provides civil and structural engineering services on new and remodel commercial, residential, medical, educational, governmental, and industrial projects. Our staff members' experience and expertise enables the firm to produce economical designs- without compromising quality. The fundamental philosophy of our practice is to operate as one body, exploring creative solutions while remaining abreast of industry advances in the execution of structural engineering. DCI Engineers is committed to providing responsible and innovative engineering services from nine offices throughout the West Coast and Alaska. DCI Engineers is licensed in all 50 states, as well as several Canadian Provinces.

PROFESSIONAL SERVICES

MCMT conducts 1-day workshops for industrial, municipal, military and institutional clients in the field of trenchless pipeline rehabilitation and new pipe installation technologies.

MCMT provides forensic engineering expertise aimed at identifying pipe and sewer failure mechanisms and recommending long-term solutions using trenchless rehabilitation technologies.

MCMT provides engineering design, specification and bid packages, and field construction installation oversight for the rehabilitation and/or enlargement of existing pipelines and sewers and installation of new pipelines using trenchless pipe rehab and new installation technologies.

MCMT specializes in emergency, on-the-fly-inspection, assessment of condition, stabilization, repair, rehabilitation of pipes and sewers, large bore hot taps, large volume by-pass systems that allow on-the-fly pipe and sewer rehab, and inspection/leak detection/solids removal systems that can be applied while pipes and sewers are operating.
