### PROFESSIONAL SERVICES

Abitibi Geophysics Atlantic Inc. can design and carry out mineral exploration programmes, including full logistical support, field work and interpretation. Field work includes prospecting, geological mapping, geophysical and geochemical surveys, and diamond drilling management. Geophysical surveys include high resolution and regional GPS/gravity surveys, gradient, multi-dipole, and borehole induced polarization (IP) surveys, time and frequency domain electromagnetic (EM) surveys (borehole and surface) magnetic surveys, ground penetrating radar (GPR) surveys. We provide a high level of interpretation, integrating all field results. To support geophysical interpretation we also offer 2D and 3D inversion modeling of IP, EM, mag, and gravity data.

Abitibi also designs, performs, and interprets surveys in geotechnical, and contaminant environments. Techniques include ground penetrating radar (GPR), electromagnetic, magnetic, conductivity/resistivity mapping (EM/IP). Applications include mapping bedrock depth, location of buried utilities, structures, and cavities, mapping of contaminant plumes.

Petroleum Exploration - management and logistical support in land seismic surveys, gravity and marine magnetic surveys.

ADI Limited is a multi-disciplinary firm of professional engineers and geoscientists offering expertise and experience in a broad range of disciplines for projects in the following areas:

- municipal infrastructure from water supply and sewage disposal to roads and solid waste management systems
- environmental audits, resource inventory and management, Phase I, II, and III site assessments and site remediation, risk and impact assessments, policy analysis, and public consultation processes
- geotechnical engineering and materials testing for commercial and residential building projects, wharfs, roads, bridges and airports, as well as development of public and private groundwater supplies

Services provided range from preliminary studies and assessments through pre-design, design, preparation of project documentation (plans and specifications), tender call and contract award, to contract administration and inspection services.

ADI Limited is registered with the Association of Professional Engineers and Geoscientists of Newfoundland (APEGN) and is a member of Newfoundland Environmental Industry Association (NEIA).

Altius conducts mineral exploration programs on 32 mineral properties in Newfoundland and Labrador and two in New Brunswick. Several of these mineral properties are subject to earn-in or joint venture agreements with other industry partners. In most instances, exploration partners retain Altius' expertise and manpower to conduct exploration programs on their behalf.

Since Altius Resources is wholly owned by publicly traded Altius Minerals Corporation, we want to ensure that all facets of our mineral exploration programs, either for our own projects or those partnered, meet with all compliance and regulatory controls.

Atlantic Engineering Consultants Limited offers a multi-disciplinary range of consulting services in the areas of Municipal, Civil, Structural, Electrical, Mechanical and Environmental design, contract administration and project management including procurement and construction supervision. Services encompass the total project from initial concepts, feasibility and economic studies to the design and final construction stage.

Atlantic Engineering Consultants Limited's team of experienced professionals and support staff can capably handle a broad range of construction projects. Building services include the design of varying building types including residential, commercial, institutional and industrial. Civil services offered include Municipal Engineering such as subdivision design, water supply and distribution systems, sewage disposal and treatment systems, runoff and flood control, highway and road design, bridges, drainage structures and marine projects such as wharves, breakwaters, retaining structures, docking facilities, cargo terminals and passenger terminals. Heavy Civil services offered include Engineering, Procurement and Construction supervision for the Pulp and Paper, Mining and Manufacturing Industries along with service to the Offshore Oil Industry. Also included are transportation structures such as highways, bridges and culverts, underpasses and overpasses, retaining structures and drainage structures. Electrical services offered include building electrical systems, transmission and distribution systems, fire alarm, lighting and emergency power systems, along with control and energy management systems. Mechanical capabilities include heating, ventilation, air conditioning, plumbing and fire protection systems for residential, commercial, institutional and industrial projects. Environmental services include environmental assessments and impact statements, studies, monitoring programs, etc.

### PROFESSIONAL SERVICES

Established in 1998 as an instrumentation calibration lab dedicated to the Eastern Canadian offshore oil industry, CAHILL Instrumentation has evolved and expanded on the strength of its client relationships to become a full service industrial automation & control service provider.

At CAHILL Instrumentation, we aim to be the preferred automation systems engineering and service organization in Atlantic Canada, providing a comprehensive suite of superior value engineering, fabrication, field, and calibration services.

Our scope of service for our industrial client base currently includes: (1) Electrical, Instrumentation & Control Engineering Services; (2) related Mechanical / Manufacturing Engineering Services; (3) Panel Design and Fabrication Services ; (4) Start-up and Commissioning Services; (5) Field PM and Repair Services (24x7); (6) Lab Calibration Services and; (7) Instrumentation and test equipment rental and sales.

Our objective is service and business excellence: the delivery of the highest levels of quality and value, in a timely and safe manner, and with a focus on respect for the client and all stakeholders.

### PROFESSIONAL SERVICES

C-CORE is a Canadian corporation providing innovative engineering solutions to national and international clients. Its dynamic team of over 60 engineering and business experts provide advanced technology solutions to production issues and market challenges encountered in primarily the natural resource sectors including offshore oil and gas production and transportation, gas transmission (onland pipelines) and mining. International and national government clients also use the services of C-CORE to address security, sustainability and safety issues related to their regulatory and operating needs.

In business since 1975, C-CORE's specialized engineering services are focused on technology adaptation and integration, design recommendations and engineering analyses. Project teams are assembled based on client need and draw upon the corporation's core expertise in:

- Radar & Vision Systems
- Ice Engineering
- Geotechnical Engineering

Many complex projects require a multi-faceted solution where this expertise is combined for a complete, end-to-end solution.

C-CORE is registered to: ISO 9001:2008

### PROFESSIONAL SERVICES

CORE Engineering Ltd. is a mechanical and electrical consulting engineering firm born from Newton Engineering Limited, first established in 1982. The firm employs a highly competent staff of engineers and technicians, whose experience and knowledge have gained them a strong reputation as leaders in their field.

CORE employs two mechanical engineers, two electrical engineer, six senior technicians, three intermediate technicians and two administrative persons, all of whom are skilled with the use of computers and software packages related to their field of expertise.

We also follow an integrated design approach whereby considerations are not made unilaterally to benefit a single discipline but rather decisions are made to benefit the project as a whole. Our continuing efforts to facilitate detailed coordination between all disciplines involved in a project will ensure the designs produced are able to be constructed as well as functional.

In addition to the general mechanical and electrical building systems design, NEL also provides the following specific services: Energy Management, Heat Pump Technology, Control Systems, Industrial Refrigeration, Petroleum Industry, Propane Systems and Power Quality.

FGA Consulting Engineers Limited is a Newfoundland firm established in 1983, providing multi-disciplinary engineering consulting services in the areas of:

- . Structural Engineering
- . Welding Engineering
- . Civil Engineering
- Materials Engineering
- . Mechanical Engineering
- . Prime Consulting Services
- . Non-Destructive Examination
- . Forensic Engineering

Originally formed to provide specialized consulting engineering services in the fields of structural design and welding engineering, it has expanded around these two specialities to meet the specific needs of its customers and the Newfoundland industrial marketplace.

FGA is a division of ACUREN Group Inc., through which it provides consistent competent and conscientious service by a team of engineers and inspection specialists dedicated to providing integrity, quality service and professionalism in the field of non destructive examination.

Fracflow Consultants Inc. (Fracflow) is a 100% Canadian owned and operated company that was founded in 1981 to provide specialized consulting services in hydrogeology and geological engineering. Since that time, Fracflow has grown and now offers a wide range of services in: Hydrogeology and Surface Water Hydrology; Environmental Assessment and Remediation; Contaminant Hydrogeology; Geological Engineering and Rock Mechanics; Geotechnical Engineering and Soil Mechanics; Environmental Impact Assessment. The services provided by Fracflow range from simple analysis based on our collective experience and judgement to state-of-the art field studies and numerical modelling. We are a group of professional engineers and geoscientists committed to using the most appropriate level and methods of investigation and analysis for a given problem, taking into account both technical and economical considerations. Fracflow has conducted a number of multi-component and multidisciplinary projects. Where necessary, Fracflow augments a project team with specialists or establishes joint ventures with other firms, as needed, for specific projects. This arrangement ensures that the personnel assigned to each project have the qualifications and experience necessary to meet project needs, using local expertise wherever possible. Our clients include government and research organizations as well as companies in the mining, construction, consulting, and petroleum sectors. Activities range from overall project management to specialized rock, soil, and water testing services.

Kavanagh & Associates Limited (KAL) is a privately owned company licensed to practice engineering in the Province of Newfoundland and Labrador. Expertise is primarily in the civil engineering discipline, particularly heavy civil engineering projects. KAL is also experienced in environmental site assessments, investigation of contaminated sites with both hazardous and non-hazardous material and site remediation.

The KAL engineering team has more than 30 years experience in the design and construction supervision of:

- . Water supply systems
- . Potable and wastewater pumphouses
- . Water treatment plants
- . Water storage reservoirs
- . Storm sewerage systems
- . Sanitary sewerage systems
- . Residential, industrial and commercial land development
- . Storm and sanitary sewerage systems
- . Buildings
- . Highway construction and urban street rehabilitation

In addition KAL has conducted comprehensive engineering studies for long range planning of water supply, sanitary and storm sewerage systems. KAL is registered to ISO 9001:2000 standard.

### PROFESSIONAL SERVICES

Oceanic Consulting Corporation is an engineering firm specializing in performance evaluation of naval architectural and ocean engineering systems.

An alliance venture between the private sector, National Research Council of Canada, and Memorial University of Newfoundland, the firm is a commercial front door to one of the world's most comprehensive collections of ocean engineering facilities.

Our people have an extensive background in performance assessments of ships, offshore structures, small craft, survival equipment and other marine systems in a range of severe conditions from arctic environments to extreme seas. This combination of facilities and expertise enables Oceanic to cost effectively provide our clients with timely, world class results.

Pro-Dive Marine Services is one of Canada's largest providers of subsea services offering state of the art diving and ROV equipment, qualified, experienced personnel, all supported by in house engineering capabilities. We have a proven track record in a full range of offshore oilfield support and continue to set the standard for quality and safety in a results oriented industry. Pro-Dive Marine Services is registered to the ISO 9001: 2000 quality standard and operate under a recognized safety management system. We specialize in the provision of offshore ROV services, saturation diving services, design and construction of subsea concrete mattresses, offshore grouting services, subsea excavation, offshore project support staff and subsea engineering services. In addition, we can provide a full range of underwater inspection services for both the inshore and offshore markets.

Pro-Dive Marine Services is registered with Professional Engineers and Geoscientists Newfoundland and Labrador(PEGNL). Our safety management system has received its Certificate of Recognition from the Newfoundland and Labrador Construction Safety Association.

QuadraTec Inc. consolidates the skills and creative talents of experienced professionals including senior mechanical engineers, senior electrical engineers, technologists and support personnel. Incorporated in 1993, QuadraTec is one of Atlantic Canada's leading Mechanical and Electrical engineering firms. We offer specialized expertise in the design of mechanical and electrical systems for commercial industrial and institutional projects. Our clients benefit from the full-time attention senior staff. Highly trained, experienced partners bring hands on approach to every project, from initial meetings to planning and design, to commissioning. We believe that the best way to ensure quality is to stay in touch with clients and their concerns, while bringing the most qualified resources to the project's needs. The combination of experienced professionals and state-of-the-art, in-house technical systems ensure our clients efficient knowledge-based solutions to their project challenges.

QuadraTec provides a total range of services, from concept to completion. From feasibility studies, to preliminary planning, to final design and execution. QuadraTec can see your project through to successful completion. We can also provide contract administration services including scheduling and inspection, field testing, operations and maintenance manuals and commissioning. State-of-the-art, integrated computer systems, equipped with up-to-date software, provide us with the tools to meet the challenges and demands of project requirements.

### PROFESSIONAL SERVICES

Technip Canada Limited, the Canadian division of Technip is based in St. John's, NL.

The company's involvement in the oil industry offshore Atlantic Canada now spans over eleven years, and it continues to build on its commitment and experience in the region. With over 40 years of experience in the design and construction of large industrial facilities, a wide range of state-of-the-art technologies and operational bases spread over the 5 continents, the Group is able to manage all aspects of major projects at optimized costs, from front end engineering design to turnkey delivery.

With a workforce of 20,000 people worldwide, and annual revenues of about 5 billion euros, Technip ranks among the biggest full-service engineering and construction groups in the field of hydrocarbons and petrochemicals.

Mercator Geological Services Limited is a Dartmouth based geological consulting firm that has been providing professional services to the mining and energy sectors for over 14 years. Our strong team of professional geoscientists and support personnel offers expertise in project design and management, mineral resource modeling and evaluation, site based environmental services, GIS mapping, quality assurance and quality control studies, and technical reporting.

By utilizing specialized computer applications and professional field services, we've developed proficiency in various geological, geochemical, geotechnical, and geophysical survey methods, and these augment sound experience in drilling program management and design. Project work has included involvement in public consultations, environmental site assessments and permitting, compliance monitoring, mining site remediation, erosion control, resource estimation studies and mineral exploration activities.

Mecator's domestic and international consulting experience is focused on innovative solutions, sound technical advice and state of the art field-oriented services. Full-service support, web based services, and comprehensive corporate graphics and presentation materials complete the package, providing the clients with a fully integrated professional consulting service.
